

## SELF INTRODUCTION

My name is [REDACTED]. Currently, I am [REDACTED] years old. If i talk about my qualification, I recently completed my [REDACTED] and now am pursuing my graduation from [REDACTED]. Alongside my studies, i am actively working on developing the skills required to become a Data Scientist or Analyst.

I find this field interesting because data science combines problem-solving with creativity, allowing me to turn complex data into meaningful insights. To prepare for this career, I have been building a strong foundation in technical skills. I am proficient in tools like Python, Excel, Power BI and SQL. Which helps me handle data effectively--from analysis to visualization.

Beyond academics and technical work, I enjoy spending time reading about technology, personal development, and human psychology. These topics not only keep me updated but also help me stay motivated and improve my understanding of the world.

In the future, I aim to contribute to projects that make data more accessible and helping businesses and organisations to make smarter decisions.

So, This is all about me!

Thank you for giving me the opportunity to share a bit about myself.
